

Phospho-p53 (Ser366) Ab

| Cat.#: AF3078 Size: 100ul,200ul | Concn.: 1mg/ml Source: Rabbit | Mol.Wt.: 48kDa Clonality: Polyclonal |
|------------------------------------|--|---|
| Application: | WB 1:500-1:2000 IHC 1:50-1:1000, IF/ICC 1:100-1:500 | |
| Reactivity: | Human,Mouse | |
| Purification: | The Ab is from purified rabbit serum by affinity purification via sequential chromatography on phospho- and non-phospho-peptide affinity columns. | |
| Specificity: | Phospho-p53 (Ser366) Ab detects endogenous levels of p53 only when phosphorylated at Serine 366. | |
| Immunogen: | A synthesized peptide derived from human p53 around the phosphorylation site of Serine 366. | |
| Uniprot: | P04637 | |
| Description: | Tumor protein p53, a nuclear p in the regulation of cell cycle, s from G0 to G1. It is found in ver however, in a variety of transfo expressed in high amounts, and transformation and malignancy | pecifically in the transition ry low levels in normal cells, rmed cell lines, it is d believed to contribute to |
| Subcellular Location: | Cytoplasm; Cytoplasm. Nucleus Endoplasmic reticulum. Interact nuclear localization. Recruited in CHEK2; Nucleus. Cytoplasm. Lo cytoplasm in most cells. In som nucleus that are different from Localized in the nucleus in most cytoplasm in some cells; Nucleus mainly in the nucleus with mino Nucleus. Cytoplasm. Predomina the cytoplasm when expressed Cytoplasm. Predominantly nucl cytoplasm following cell stress. | tion with BANP promotes into PML bodies together with calized in both nucleus and e cells, forms foci in the nucleoli; Nucleus. Cytoplasm. t cells but found in the us. Cytoplasm. Localized or staining in the cytoplasm; antly nuclear but localizes to with isoform 4 and Nucleus. ear but translocates to the |
| Tissue Specificity: | Ubiquitous. Isoforms are express normal tissues but in a tissue-d is expressed in most normal tis brain, lung, prostate, muscle, for fetal liver. Isoform 3 is expressed is not detected in lung, spleen, and fetal liver. Isoform 7 is exp but is not detected in prostate, breast. Isoform 8 is detected or | ependent manner. Isoform 2 sues but is not detected in etal brain, spinal cord and ed in most normal tissues but testis, fetal brain, spinal cord ressed in most normal tissues uterus, skeletal muscle and |

testis, fetal brain and intestine. Isoform 9 is expressed in most normal tissues but is not detected in brain, heart, lung, fetal liver, salivary gland, breast or intestine.

Similarity: The nuclear export signal acts as a transcriptional repression domain. The TADI and TADII motifs (residues 17 to 25 and 48 to 56) correspond both to 9aaTAD motifs which are transactivation domains present in a large number of yeast and animal transcription factors.Belongs to the p53 family.

Storage Condition and Buffer:

Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol.Store at -20 °C.Stable for 12 months from date of receipt.

Western blot analysis of extracts from HepG2, using Phosphop53 (Ser366) Ab. Lane 1 was treated with the blocking peptide.

AF3078 at 1/100 staining Mouse colon tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the Ab for 1.5 hours at 22°C. An HRP conjugated goat anti-rabbit Ab was used as the secondary.

IHC analysis of human gastric cancer tissue, using Phosphop53 (Ser366) Ab.

AF3078 staining MDA-MB-435 by IF/ICC. The sample were fixed with PFA and permeabilized in 0.1% Triton X-100,then blocked in 10% serum for 45 minutes at 25°C. The primary Ab was diluted at 1/200 and incubated with the sample for 1 hour at 37°C. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) Ab, diluted at 1/600, was used as the secondary Ab.

IMPORTANT: For western blot, incubate membrane with diluted primary Ab
in 5% w/v milk , 1X TBS, 0.1% Tween®20 at 4°C with gentle shaking,
