

HER4 Ab

Cat.#: AF6445 Concn.: 1mg/ml Mol.Wt.: kDa

Size: 100ul,200ul Source: Rabbit Clonality: Polyclonal

Application: WB 1:500-1000 IHC 1:50-1:200 IF/ICC 1:100-1:500

Reactivity: Human, Mouse, Rat

Purification: The antiserum was purified by peptide affinity

chromatography using SulfoLink™ Coupling Resin (Thermo

Fisher Scientific).

Specificity: HER4 Ab detects endogenous levels of total HER4.

Immunogen: A synthesized peptide derived from human HER4.

Uniprot: Q15303

Description: The HER4/ERBB4 gene is a member of the type I receptor

tyrosine kinase subfamily that includes EGFR (MIM 131550), ERBB2 (MIM 164870), and ERBB3 (MIM 190151). It encodes

a receptor for NDF/heregulin (MIM 142445).

Subcellular Location: Membrane and Nucleus. Following proteolytical processing

E4ICD (E4ICD1 or E4ICD2 generated from the respective isoforms) is translocated to the nucleus. Significantly more E4ICD2 than E4ICD1 is found in the nucleus. E4ICD2

colocalizes with YAP1 in the nucleus.

Tissue Specificity: Expressed at highest levels in brain, heart, kidney, in

addition to skeletal muscle, parathyroid, cerebellum, pituitary, spleen, testis and breast. Lower levels in thymus, lung, salivary gland, and pancreas. Isoform JM-A CYT-1 and isoform JM-B CYT-1 are expressed in cerebellum, but only

the isoform JM-B is expressed in the heart.

Similarity: Belongs to the protein kinase superfamily. Tyr protein kinase

family. EGF receptor subfamily.

Storage Condition and

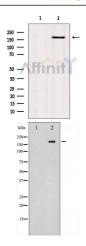

Buffer:

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at -20

°C.Stable for 12 months from date of receipt.

Western blot analysis of extracts from HUVEC, using HER4 Ab. Lane 1 was treated with the blocking peptide.

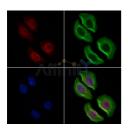

Western blot analysis of HER4 expression in whole cell lysates, The lane on the left was treated with the antigenspecific peptide.

AF6445 at 1/100 staining Mouse kidney tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the Ab for 1.5 hours at 22° C. An HRP conjugated goat anti-rabbit Ab was used as the secondary.

AF6445 at 1/100 staining human brain tissues sections by IHCP. The tissue was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The tissue was then blocked and incubated with the Ab for 1.5 hours at 67°C

AF6445 staining HepG2 cells by IF/ICC. The samples were fixed with PFA and permeabilized in 0.1% Triton X-100,then blocked in 10% serum for 45 minutes at 25°C. Samples were then incubated with primary Ab(AF6445 1:200) and mouse anti-beta tubulin Ab(T0023 1:200) for 1 hour at 37°C. An AlexaFluor594 conjugated goat anti-rabbit IgG(H+L) Ab(Red) and an AlexaFluor488 conjugated goat anti-mouse IgG(H+L) Ab(Green) were used as the secondary Ab.

AF6445 staining HuvEc by IF/ICC. The sample were fixed with PFA and permeabilized in 0.1% Triton X-100,then blocked in 10% serum for 45 minutes at 25°C. The primary Ab was diluted at 1/200 and incubated with the sample for 1 hour at 37°C. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) Ab, diluted at 1/600, was used as the secondary Ab.
